SUMMARY

Automation engineer who designs and ships production workflow systems for clients across Australia and India — including a content pipeline producing **300+ videos per month** and a **six-brand GoHighLevel implementation** with an AI voice receptionist and lead-qualification agent. Builds multi-router Make.com and n8n scenarios orchestrating GoHighLevel, Twilio, VAPI, OpenAI, ElevenLabs, Creatomate, and the Meta and YouTube APIs, with webhook deduplication, rate-limit throttling, and retry logic so pipelines run unattended. Backs automation work with real software engineering — FastAPI, Node.js, Next.js, and PostgreSQL — so builds are not limited to what no-code platforms expose. Final-year B.Tech CSE (expected May 2027). Smart India Hackathon 2025 National Finalist, team lead, top 0.1% of 50,000+ teams.

EXPERIENCE

AI Automation Engineer — Codexlane Infotech Pvt. Ltd.

- Design multi-router Make.com and n8n scenarios orchestrating GoHighLevel CRM with OpenAI, ElevenLabs, Creatomate, Meta Graph API, YouTube Data API, Twilio, and VAPI.
- Configure GoHighLevel sub-accounts, pipelines, funnels, and automation workflows end to end for client delivery.
- Act as primary technical contact on client accounts — requirement gathering, build, and full rebuild documentation as a standard deliverable.

Freelance Automation Engineer — Multiple Clients, Australia and India

- **Six-brand GoHighLevel implementation** for an Australian tree-care group. Configured 6 sub-accounts with Twilio SMS workflows, call forwarding, an AI receptionist, and a VAPI lead-qualification voice agent, so inbound calls outside business hours are answered, qualified, and routed instead of lost.
- **Content pipeline producing 300+ videos per month** for an MSME brand. Architected a Make.com scenario chaining OpenAI (scripting) → ElevenLabs (voice) → Creatomate (render) → Meta and YouTube APIs (publish), with token-bucket throttling on rate-limited endpoints, webhook deduplication to prevent double-posting on replayed hooks, and exponential-backoff retries on render failures.
- **"Mark," a VAPI voice booking agent** with two-way GoHighLevel ↔ Google Calendar synchronisation. Diagnosed and fixed tool-call failures, timestamp mismatches across timezones, and availability-sync drift that was producing double-bookings.
- **Finance and operations automation** for an agricultural client on Make.com and Airtable: invoice parsing and reconciliation, promotional and event scheduling through Google Calendar, and raw-material restock tracking with threshold alerts.
- **Lead-generation funnels and CRM pipelines** across multiple client engagements — landing pages, multi-channel follow-up via SMS, email and voice, appointment booking, and onboarding sequences.
- **Custom backend work where no-code hit its limits** — built the Jain Consultancy platform in Node.js with OTP authentication, WhatsApp and email automation, and custom form processing.

ENGINEERING PROJECTS

Software built beyond no-code platforms — the foundation that lets automation work extend past what visual builders expose.

AI-First CRM with LangGraph Agent — FastAPI, LangGraph, Groq, React, Redux Toolkit

Conversational CRM where a **ReAct agent with 5 tools shares the same CRUD layer as the REST API**, so agent-driven and form-driven writes cannot diverge. Two-tier model routing (Llama 3.3 70B for reasoning, 3.1 8B for extraction) cuts cost and latency; layered rate-limit resilience combines SDK exponential backoff with custom 429 detection and graceful degradation.

Civic Grievance Triage Platform — Flask, Google Gemini, Google Maps

Trilingual (Bengali/Hindi/English) reporting system, 22 routes. Gemini classification backed by a **complete rule-based fallback** — so the platform runs with **zero API keys** and a submission never stalls on a third-party outage. Explainable 0–100 urgency scoring with human-readable justifications; duplicate detection combining geo-proximity and text similarity.

Telemedicine Booking Backend — Fastify, TypeScript, PostgreSQL, Redis, BullMQ, Docker

36 REST endpoints, 16 tables, 10 migrations. Postgres-durable **idempotency layer** with request fingerprinting and exact response replay; **3-step booking saga with compensating transactions** guarded by row locks and a delayed recovery job; AES-256-GCM field encryption with a rotatable key ring. OpenTelemetry and Prometheus instrumentation, GitHub Actions CI with live service containers.

NEET/JEE Exam Platform — Next.js 16, React 19, Prisma, PostgreSQL, Gemini

17-model schema, server-derived exam timer immune to client tampering, polymorphic scoring engine with negative marking, and streamed AI explanations that fall back to author solutions when the API is unavailable.

Realtime Chat System — Node.js, Socket.IO, MongoDB/SQLite, React Native (Expo)

Web and Android chat with **reference-counted presence** correct across multiple tabs, pluggable storage behind a repository interface, and acknowledgement-based delivery receipts. Deployed on Render.

EDUCATION

B.Tech, Computer Science & Engineering — Techno International Newtown, Kolkata (MAKAUT) | Expected May 2027
CGPA: 7.76/10

Coursework: Data Structures & Algorithms, Machine Learning, Computer Networks, Database Management Systems, Image Processing

Higher Secondary (XII) — Pearls Of God, Kolkata | 2023

ACHIEVEMENTS

- **Smart India Hackathon 2025 — National Finalist** (Hardware). Team lead, Suryadut solar-powered de-watering system for mining operations. Selected among the top 0.1% of 50,000+ competing teams nationally.
- **AI For Bharat 2025** — Lead Developer, GramLink AI: multilingual government scheme eligibility assistant.
- **EIBS 2025** — Lead Developer, Bond Buy: blockchain bond tokenization platform with SIP infrastructure on WeilChain.
- **Google Developer Groups "Build with AI," Kolkata** — People's Priorities: trilingual civic grievance triage platform.

TECHNICAL SKILLS

Automation Platforms: Make.com, n8n, GoHighLevel (GHL), Airtable, Zapier-equivalent logic, multi-router scenarios, iterators, aggregators, data stores, webhook orchestration

AI & Voice Automation: VAPI, OpenAI API, ElevenLabs, Google Gemini, Groq, LangGraph, ReAct agents, tool calling, AI receptionists, conversational agents

Integrations: Twilio (SMS/voice), Google Workspace (Calendar, Sheets, Gmail), Meta Graph API, YouTube Data API, Creatomate, Slack, REST APIs, OAuth 2.0

Reliability Engineering: Webhook deduplication, retry with exponential backoff, rate-limit throttling, idempotency, saga compensation, error handling, monitoring, alerting, failure recovery, graceful degradation

CRM & Delivery: GoHighLevel sub-account architecture, pipelines, funnels, landing pages, booking systems, client onboarding, requirement analysis, rebuild documentation

Languages: Python, TypeScript, JavaScript, Java, C, SQL

Backend & Data: FastAPI, Node.js, Express, Fastify, Flask, Next.js, PostgreSQL, MongoDB, SQLite, Redis, SQLAlchemy, Prisma, BullMQ, schema design, migrations

Frontend: React.js, Next.js, Redux Toolkit, React Native (Expo), Tailwind CSS

Infrastructure: Docker, GitHub Actions CI, Vercel, Render, Linux, Git, OpenTelemetry, Prometheus
